GLOUCESTER RUGBY CLUB

The Challenge

With an injection of £10 million towards its future, Gloucester Rugby Club began building a new 7,000 capacity seated stand which incorporated a state of the art conferencing facility at the Kingsholm ground, available seven days a week.

The new facility needed to include telecoms, IT, data, audio visual, PA, electronic security and fire systems. The brief required the contractor to successfully reflect the ambition of the club whilst also being innovative, reliable and cost effective.

Instead of employing several contractors to carry out this work, the club approached Allcooper to provide a total, in-house technology infrastructure solution. As Allcooper could provide this cost effective service, where others could not, they subsequently won the contract.

The Solution

Allcooper have looked after the CCTV, Fire and Intruder systems for Gloucester Rugby Club for many years. However, the creation of Allcooper Converge, the specialist IT and infrastructure division of the company, meant that Allcooper could offer their expertise in a wider range of products and services.

The work Allcooper has done for Gloucester Rugby Club exemplifies these services:

IT Support & Disaster Recovery – Supplying, configuring and supporting the Club's servers and information systems using the latest in network monitoring and disaster recovery technology on both match and non-match days.

Network Cabling – Over 400 Connectix Category 5e data points were installed in the new stand, offices and hospitality areas.

Wireless Internet – Working In conjunction with ARUBA, Allcooper oversaw the installation of a new, highly encrypted, secure, fully zoned system, allowing wireless access for authorised club personnel and a partitioned open channel for the world's press.

Public Address System – Working in conjunction with Bosch, Allcooper installed a new multi-zone system including speakers in all public areas with external points throughout the stadium.

A/V Distribution – The installation of a new TV and AV distribution system that provided a single control point for all screens in the whole ground.

Fire Control – The integration of the site's current Allcooper system to the new south stand system.

CCTV – The installation of high end fully functional cameras and digital recording.

Intruder Alarm System – The installation and integration of intruder alarm systems into the grounds' existing monitored alarm systems.

IP Surveillance – Allcooper installed IP networked cameras for computerised match analysis.

Other recently completed Integrated System Projects

- £250,000 DR Site
- £100,000 Installation for Software Company
- £50,000 Wireless Data Network Solution
- £25,000 Infrastructure Project
